Fiber
a new production system based on GSIM

- Eliminate legacy systems, Excel, and hard-to-manage SQL scripts.
- Secure and stable production with traceability and transparency.
- Increased automation, allowing the organization more time for analysis.
- Metadata-driven production. More focus on clear and effective design of the production flow.
- Central management of metadata.
- Improved support for validation and reporting.
- Production should not be dependent on IT personnel.
- The organization should be able to work efficiently with its development/testing and production.
