# The Modernisation of the Central Metainformation System in Accordance with the LOD and FAIR Principles

[aniko.mohay@ksh.hu](mailto:aniko.mohay@ksh.hu)

*Anikó Mohay, Zsuzsana Mahr Oberné*

# Outline

- The basic of the Central Metainformation System
  - Types of metadata
  - Users of metadata
  - Technical background
  - Relationships
  - Metadata-driven
- Linked Open Data – FAIR – Semantic Technology

# Outline

- The present situation in Central Metainformation System
- LOD architecture design
  - Interpretation of data
  - Linking of data
  - Accessibility and discovery of metadata
- Development - Conclusion

# *Types of Metadata*

Grouping metadata according to their purpose and subject

- Structural metadata: describe individual pieces of information and their relationships.
- Descriptive metadata
  - Content identifier
  - Content description (definitions of concepts and nomenclature elements, which can be textual or algorithmic)
  - Metadata describing the data production process and applied methods
  - Metadata describing quality

# *Types of Metadata*

Grouping metadata according to their purpose and subject

- Control metadata
  - Control of data collection
  - Control of data preparation
  - Control of processing
  - Control of data warehousing/querying

# Users of Metadata

## Who are the users?

- Non-expert users
  - Clear description
- Expert users
  - Detailed description (methodology, quality)

## External users

# Users of Metadata

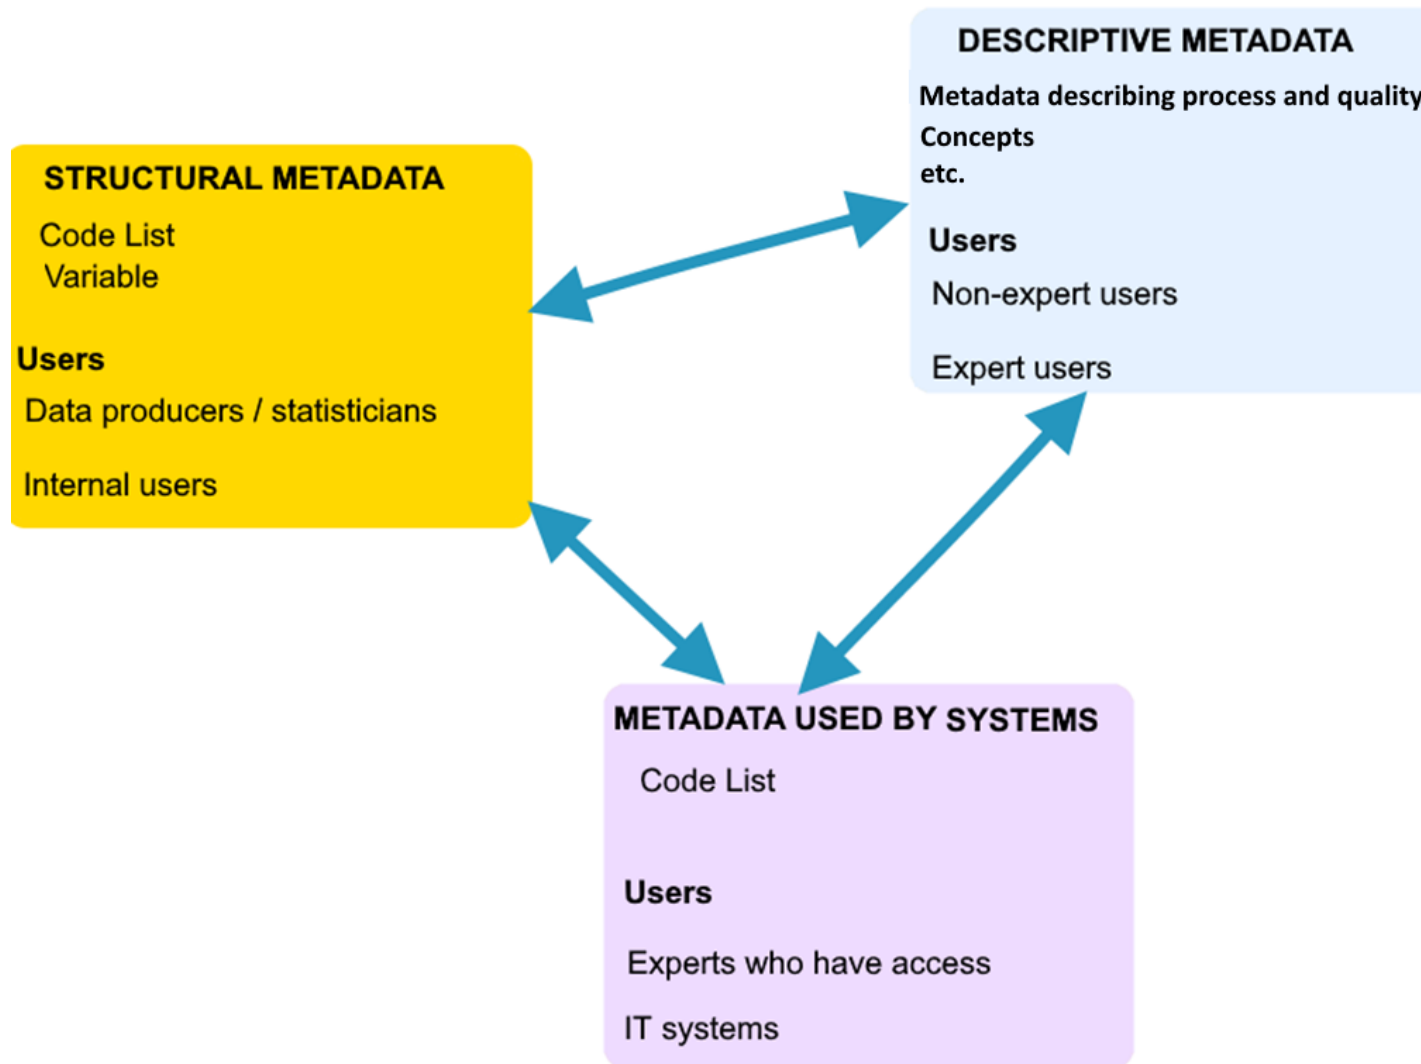

## Who are the users?

- Statisticians, experts
  - Detailed description, connections
- IT experts responsible for data processing
  - ✓ Description of production database
  - ✓ Description of data warehouse
- Softwares, programmes
  - Information for operation

## Internal users

# Types of Metadata

# *Basic of Central Metainformation System*

## **Aims:**

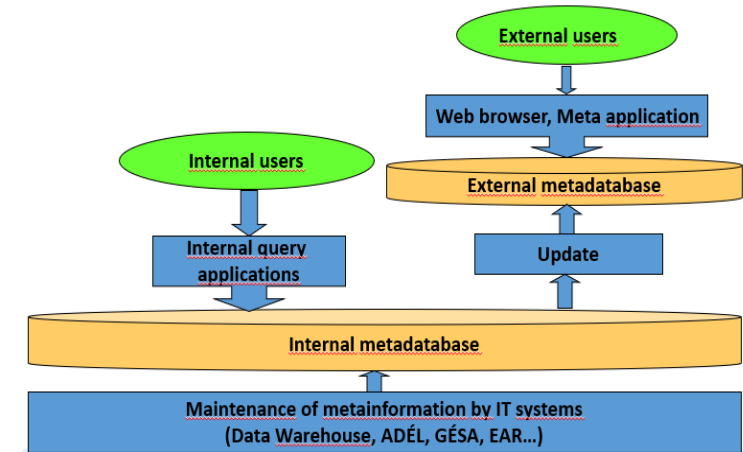

- Give information to users on content, quality and process method of data
- Ensure documentation for statisticians and experts
- Ensure operation information for softwares, programmes
- Meet international needs

# Metadata-driven

- **Metadata-driven:**

Based on the descriptions above, it is evident that the metadata recorded in the Central Metainformation

System currently control and support various tools for statistical business process. In the operation and development of the Central Metainformation System, we continue to strive for achieving metadata-driven processes, which means the determination of how software and programs operate through control metadata.

# Technical Background

## Base on:

- ORACLE SQL Developer

## Development environment:

- Windows

## Three-tier environment:

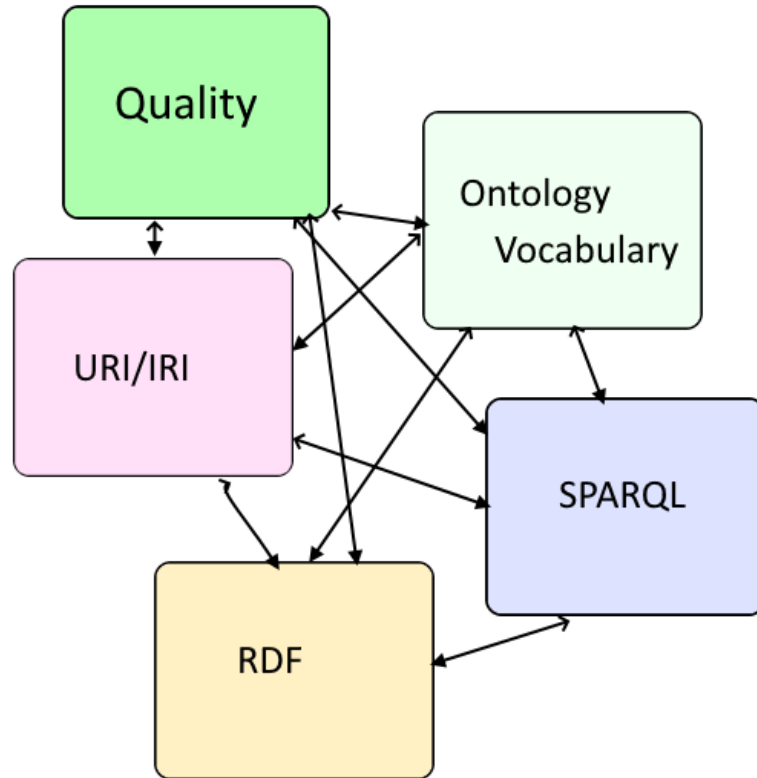

- Developer
- Testing
- Production

## User interface:

- SQL Forms

# LOD – FAIR DATA – Semantic Technology

Semantic Technology

*Findable*  
*Accessible*  
*Interoperable*  
*Reusable*

**Research DATA**

**Open DATA**

**(META) DATA**

**FAIR DATA**

# *The Present Situation in Central Metainformation System*

## What is missing?

- Institutional Background
- Standards
- Metadata harvesting
- Metainformation on microdata level visible and accessible on the website
- Permalink (URI/IRI, Cool URI )
- Reference
- Advanced search possibility

# *Present Situation in Central Metainformation System*

## **What is missing?**

- Standard machine-readable format
- Data visualization
- Contextualisation (with concepts, other data or site, etc.)
- Structure reflection (hierarchy - classifications)
- Quality of metainformation
- Search engine optimisation
- Language equivalence

# LOD Architecture Design

## Interpretation of Metadata

Legend: ●=fulfill criterion, ○ = partially fulfill criterion, – not fulfill

Interpretation of data	Central Metainformation System	Website
Fields describing and specifying metadata (Legal context, creation, responsible, etc.)	○	○
Consistent metadata	–	–
Neutral metadata	●	●
Metadata publication	○	○

## Tasks

- Defining mandatory fields
- Database cleansing
- Creation of quality indicators
- Handling homonyms and synonyms
- Utilization of multilingual thesauri
- Usage terms

# LOD Architecture Design

## Linking of Metadata

## Tasks

Linking of data

Legend: ●=fulfill criterion, ○ = partially fulfill criterion, – not fulfill

Linking of data	Central Metainformation System	Website
Conversion of metadata	–	–
Standardized metadata	–	–
Structured metadata	●	●
Machine readable metadata	○	○
The possibility of linking	○	○

- Conversion
- Machine readable metadata
- Linking metadata to other metadata and data (data enrichment)

# LOD Architecture Design

## Accessibility and discovery of metadata

## Tasks

Accessibility and discovery of metadata

Legend: ●=fulfill criterion, ○ = partially fulfill criterion, – not fulfill

Accessibility and discovery of data	Central Metainformation System	Website
Creating metadata is easy	○	–
Metadata is easily accessible, discoverable, and prominently displayed	○	–
LOD representation (search, browse, query)	-	-
Downloading metadata	○	-
Matching metadata in multiple languages	-	-
Storing metadata, version management	○	-

- Development of Central Metainformation System
- Search Engine Optimization
- Defining entity types – URI/IRI
- Data enrichment
- Utilization of dictionaries and ontologies

OECD	<a href="http://stats.oecd.org/glossary/index.htm">http://stats.oecd.org/glossary/index.htm</a>	
EU	<a href="http://ec.europa.eu/eurostat/ramon/nomenclatures/index.cfm?TargetUrl=LST_NOM&amp;Str">http://ec.europa.eu/eurostat/ramon/nomenclatures/index.cfm?TargetUrl=LST_NOM&amp;Str</a>	

# LOD Architecture Design

	FAZON	MEGNEV	ROVMEGN EV	A_R_MEGN EV	ANGMEGN EV	TOL	IG
ID denomination	ID	Denominati on of concept	Short denominati on of concept	Short denominati on of concept in English	Denominati on of concept in English	Start of validity	End of validity
Example	5837	Bevásárló- központok	Üzletköz- pontok	Shopping centers	Shopping centers	04-JAN.-01	10-JÚL. -01

# LOD Architecture Design

Cost of data

Legend: ●=fulfill criterion, ○ = partially fulfill criterion, – not fulfill

Cost of data	Central Metainformation System	Website
The cost of metadata production is low	○	–
The time required for metadata production is low	○	–

Questions of the operation/planning

What metadata have to be stored?

Who establishes metadata?

Who describes the metadata?

Who accepts metadata?

Viewpoint

Frequent use

Functions of the business processes

(applications) have to be built on

metadata

# *Development*

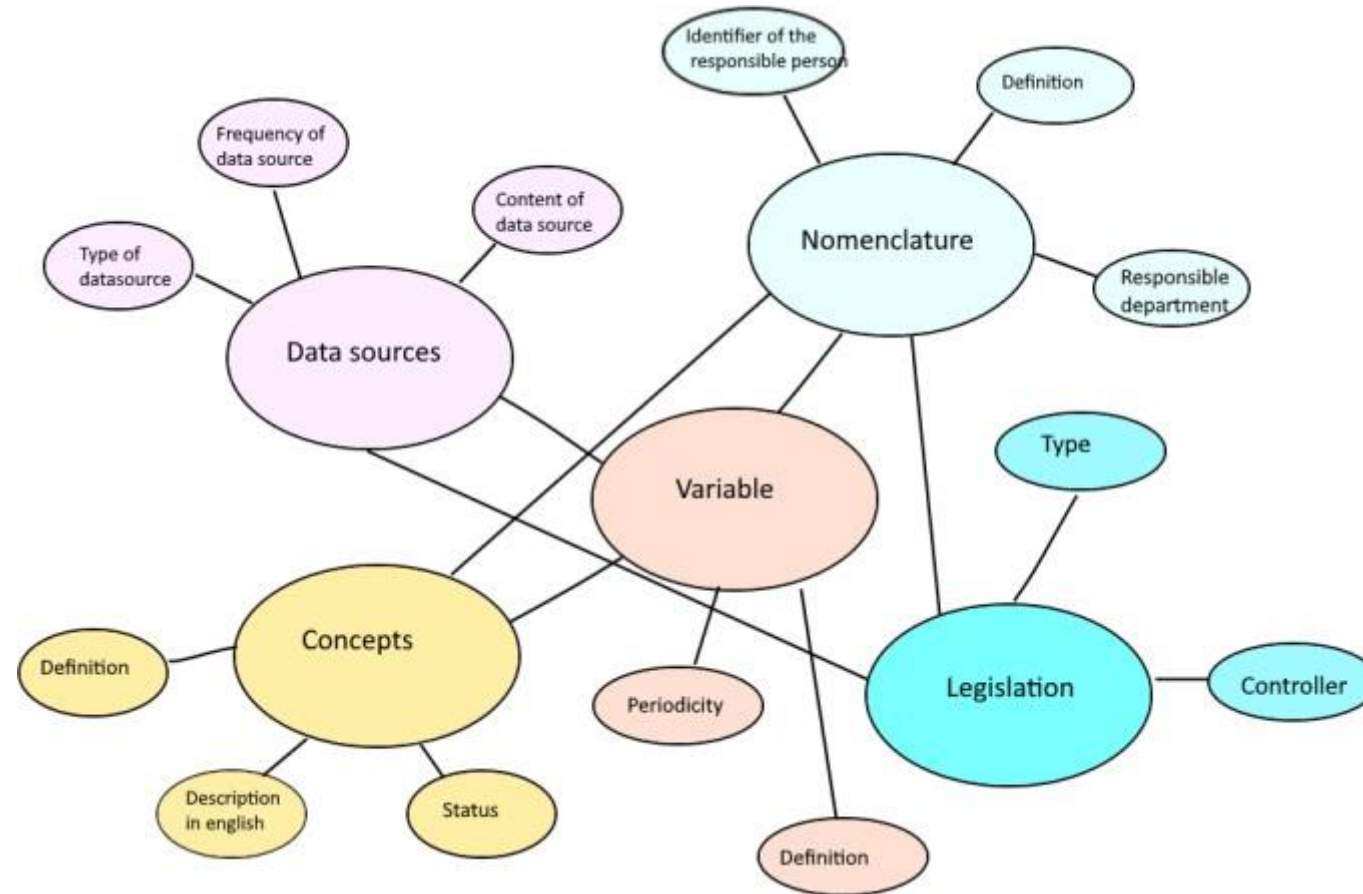

## **Guarantee for the Quality**

- Developing metainformation system in project team (meta expert, IT expert, statisticians, website: external users)
- Coordination of operation by a central unit (Methodology department or IT department)
- Training and consultancy for stakeholders (statisticians, IT and external users)
- Regular use of metadata in daily statistical works

# *Conclusion*

- Linking entities
- Interpretation of chatbot RDFs
- Assignment of terms of use
- Linking to other datasets

# Future

Thank You  
For Your Attention!
